                                                                                         ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The sc epidermidis sequences have antibacterial activity and can be used in yene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      peptides are useful for treating symptoms caused by neuronal cell loss. Such conditions especially associated with HTV infection include encephalopathies, neuropathies, memory loss, dementia, depression, psychosis and opportunistic infections. The peptides act as antagonists
cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               13-AUG-1958,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of gp120-mediated neurotoxicity and subsequent neuronal degeneration. This enables therapeutic treatment of HIV infection and other inflammatory neurological diseases, including multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY49695 and AAY49696 represent peptides which inhibit HIV-1 gp120 induced neuronal cell death.                                            hybridisation assays, and are used to inhibit expression of the protein, is as antisense molecules for treatment of tumours, particularly those of high metastatic potential. Cells that have been modified so that they no longer produce the protein are used to produce NeuSGC-free glycoconjugates for therapeutic use. The DNA encoding the protein is used to produce recombinant protein and detection of the gene, normally durmant, can be used to diagnose tomours. Glycoproteins that lack NeuSGC mure closely resemble human products and are suitable for long term therapy since they contain no non-contain epitopes (NeuSGC-containing
                                                                                                                                                                                        The present sequence represents a new isolated protein cytidine monophospho-N-acetylneuramic acid hydroxylase, which is uncontaminated by cytochrome b5 or cytochrome b5 reductase. The protein is produced by exogenous DNA in prokaryotic or eukaryotic cells and it catalyses conversion of CMP NewSort to CMP-NewSort and NewSort which hybridise to DNA approximation acid respectively). Oligomyclectides which hybridise to DNA approximation acid respectively) to detect such myolele acids by
                                                                                                                                                                                                                                                                                                                                                                           New CMP:N-acetyl-neuraminic acid hydroxylase and related DNA - used esp. to delete enzyme activity in mammalian cells, allowing product of glycosprotein(s) without N-glycosyl-neuraminic acid suitable for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             22-SEP-1995;

The enzyme catalyses the conversion of CMP-Neu5Ac to CMP-Neu5Cc (Cytidine monophosphate-Neu1Ac to CMP-Neu5Cc (cytidine monophosphate-Neu1Ac to CMP-Neu5Cc (cytidine monophosphate-Neu1Ac to CMP-Neu5Cc (cytidine monophosphate-Neu1Ac this cFNA sequence are used for the production of CMP-Neu5Ac hydroxylase-deficient mammalian cells. The modified cells are useful for the production of recombinant glyyoproteins lacking Neu3pycoloyheuraminic acid side
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N-acetyl-neuraminic acid; Neu5ac; sialic acid; porcine; CMP; cytidine monophosphate; antisense therapy; recombinant production; N-glycoloylneuraminic acid side chain deficient; erythropoietin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pornine CMP-N-acetyl-neuraminic acid hydroxylase - catalyses conversion of CMP-Neu5Ac to CMP-Neu5Gc, anti-sense sequences of DNA encoding CMP-N-acetyl-neuraminic acid hydroxylase are used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAW10735 standard: Protein: 422 AA

                                                                                                                                                                                                                                                                                                                                                                                                           Streptococcus that is prevented or invated may be moringitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography. Immunoassays. and Itstheadship.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          streptuduceus/GBS (Streptuduceus administrate) of group A streptuduceus/GAS (Streptuduceus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have autibacterial and antiinflammatory activity. (1), nucleic acids encoding (1), ABN66044-ABN71526 and antibodies that bind (1) are used in the manufacture of medicaments for the manufacture of medicaments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            27-00%-2000; 20000GR-0026333.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides the protein and coding sequences of a number of apoptosis associated proteins from the yeast Saccharomyces cerevisiae and the fungus Candida albicans. These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemia and neurodegeneration. The present sequence is one of the S. cerevisiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and neurodegeneration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method of identifying compounds that modulate a newly identified mar regulated (NIMR) polypeptide activity. The method comprises contacting an NIMR polypeptide with a test compound under interaction conditions, determining the ability of the compound to modulate the activity or expression of the polypeptide, and selecting the modulators. NIMR nucleic acids and polypeptides are used in the treatment of microbial infections, and in screening for modulators of NIMR expression and activity. These modulators can be used to reduce the infectivity of a microbe on a surface, and the virulence of a microbe in a surface, and the virulence of a microbe in a surface, and the virulence of a microbe in a surface, and the virulence of a microbe in a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe on a surface, and the virulence of a microbe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         identifying compounds that modulate a newly identified mar regulated polypeptide activity, useful as antimicrobial compounds, involves contacting the polypeptide with a test compound \dot{}
The present invention describes a carified or isolated macheic acid sequence (I) consisting essentially of one of the 93 nucleotide sequences given in ARBI202 to AABBL194. Where expression of the macheic acid in a microorganism is capable of inhibiting proliferation of a microorganism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure, Page 202-203; 526pp; English

(I) have antibacterial and antiblotic activities, and can be used in gene therapy. Expression of (I) in a microorganism inhibits proliferation of the microorganism, and the manufactured antiblotic is useful for reducing the activity or level of a gene product required for proliferation of a microorganism in a subject, specifically humans. The nucleic acids that inhibit bacterial protein to proliferation can be used as antisense therapeutics for killing bacteria. It additions to therapeutic applications, the nucleic acid sequences complementary to sequences required for proliferation can be used as diagnostic tools. For example, nucleic acid protess complementary to proliferation required sequences that are specific for particular species of microorganisms can be used as probes to identify particular microorganism species in clinical species to hadellies to AAG94431, and AAB91486 to AAAB91486 to AAAB914
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       σ

                                                                                                       The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB3300-ABB55621). The nucleic acid sequence is useful in the Jackettim and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this particular sacial action of communication of yogurt and cheese. Note: The sequence data for this particular is based on equivalent patent words: The sequence data for this particular is based on equivalent patent format directly from WIFO at ftp.wip.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABB92997 standard; Protein; 573 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 5; SEQ ID NO 2208: 261pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

New isolated reclete and detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -

Disclosure: SEQ ID NO 16692; 21pp + Sequence Listing; English.
```

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL1016-ABL30511), expressed DNA sequences (ABL10176) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipu.int/pub/published\_pct\_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
          disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG10377 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO _{\rm S}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequences (ABL01840-ABL16175) and the encoded proteins (ABB5773-ABB72072).
                                                                                                                                                                                                                       polypeptide (II) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCP) primers, cligomers, and for chromosome and grow and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tays for identifying expressed genes. (1) is useful in gene therapy technique for identifying expressed genes.
                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders on other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABG15393 standard; Protein; 1028 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          at ftp.wipo.int/pub/published_pct_s-quences.
diagnostic amino acid sequences of the invention
                                                                                                                          (II) (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its buding partners are useful in medical imaging of sites expressing (II). (1) and (II) are useful for treating
                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and
